The position of the shadow of the riba in the X-ray picture can only be utilized with great caution if at all. Early Tuberculosis in Children and Youthful Individuals. --Changes in the apices are usually not found, but alterations of the shadow at the hilus, indicating the presence of indurated caseous or calcified bronchial glands, or infiltrative processes in the neighborhood of the hilus of the bronchi, is, on the other hand, most important. The author has frequently seen the picture of a central pneumonia due to a mixed infection with pneumococci progressing slowly in spite of the disappearance of the fever, and after weeks being recognized as a tuberculous process by percussion and auscultation and bacteriologic examination. The X-ray examination should be regarded as co-ordinate to physical examination, but it has its limitations. It tells us nothing in regard to...

Reviews

This book is definitely worth acquiring. I have gone through and so I am certain that I will likely to read through again and again in the future. It's been printed in an exceptionally basic way in fact it is only after I finished reading this publication in which actually altered me, change the way in my opinion.

-- Andres Bashirian

Comprehensive guide for publication fanatics. This really is for all who state there had not been a well worth reading through. I discovered this ebook from my dad and I encouraged this book to find out.

-- Lacy Goldner
